

Equity Portfolio Factsheet

ANGELOS SOLOMOS

as of 24 September 2026

Overview

€100 invested alongside me became €257.
The S&P 500 turned the same €100 into €155.

Main account, Jan 2024 – Sep 2026. Time-weighted return rebuilt day by day from all 153 executed trades, so it measures the stock picks rather than the timing of deposits.

Growth of €100 — portfolio vs. four market indices

daily time-weighted returns · indices in EUR terms, rebased to 100 at the first trade · price indices, so index dividends are excluded

+157%

TOTAL RETURN

+41.9%

PER YEAR

+102 pp

AHEAD OF S&P 500

SHARPE RATIO

-30.6%

WORST DRAWDOWN

Built only from broker exports — no estimated prices, no invented exchange rates. Returns are time-weighted and chained daily; benchmarks are price indices in euro terms, so index dividends are excluded and the comparison is, if anything, flattering to them. Losses are not filtered out, the drawdown is shown at full depth, and absolute amounts are withheld throughout.

Second account — T212

same method, shorter window · Oct 2025 – Sep 2026

€100 → €143,
against €119 in the S&P 500.

A smaller EUR account, opened later, so a much shorter record. Measured the other way — matching the timing of each deposit — it returned **+23.2%** against **+17.0%** for the index.

MAX DRAWDOWN

Growth of €100 — ahead of all four benchmarks

time-weighted daily returns reconstructed from all 153 executed trades · benchmarks in EUR terms · price indices

Monthly returns %

from the daily time-weighted chain · EUR base

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	YTD
2024	1.2	1.2	1.4	3.2	4.3	5.6	-0.5	-3.8	3.6	1.3	7.3	5.0	+33.4
2025	4.9	-9.5	-10.5	-4.8	11.2	6.0	6.0	0.7	13.0	10.3	-2.3	0.5	+24.6
2026	9.1	-1.2	-4.9	20.7	19.4	7.2	-12.7	3.7	7.8				+54.7

How this is built. Daily time-weighted chain (Modified Dietz) from the full Freedom24 trade log — 153 executed trades — with positions marked at Yahoo closes on split-corrected quantities and flows taken at dated FX; it measures the picks, not the timing of deposits. Funding is reported as undated per-currency totals, so no IRR is claimed here; the capital headline is the money multiple $\times 2.33$, with margin netted off. Benchmarks are price indices converted to euro at dated rates and rebased to 100 at the first trade, so index dividends are excluded; the Athens General has no vendor closes for the most recent stretch and is anchored to its own published levels at both ends. Reconstructed value validates to -3.0% against the broker's own valuation; a few delisted or never-priced names (options, FTCHF, MYTIL, NKLA, PX — all closed today) carry at their last traded price. Losses are not filtered out: the EUR book is down on realized trades. Absolute amounts are withheld.

SATELLITE — REVOLUT (AMD & UBER ONLY)

AMD open since Jan 2025 · **+309% USD** · UBER closed May 2026 · **+14.3% USD** (+3.7% EUR)

How this is built. Value = open positions at Yahoo daily closes plus money already withdrawn; idle cash is not in the export, which makes the figure conservative. Two returns are shown because they answer different questions: time-weighted (+42.9%) measures the picks, money-weighted XIRR (+40.3%) measures the account as an investment, including the drag of capital that arrived late. The +23.2% figure is deposit-matched — every contribution is also made to buy the index on the same day, which is the only fair like-for-like — against +17.0% for the S&P 500 on the same schedule. Benchmarks are price indices in EUR terms. Realized side note: the 14 closed trades are marginally negative. The leveraged CFD account is a separate category and is never mixed into these equity figures. Absolute amounts are withheld.

92%

HELD IN USD ASSETS

Every position — both accounts, one table

Every position in both accounts, largest first. **Absolute amounts are withheld on purpose** — weights and returns show how the book is built and how each holding did, without disclosing the size of the account. Positions are those of the broker export of 13 July 2026, carried forward and valued at Yahoo closing prices of 24 September 2026; dollar positions weighted in euro at the dated rate 1.1439. Revolut is out of scope apart from two satellite names, and the leveraged CFD account is excluded entirely.
